Second Nature, the lifestyle change programme that uses cutting-edge technology, a dedicated dietitian and the latest scientific research to transform people's health, fitness and mindset, has raised a \$10M (£7.7M) Series A investment. This round was led by Beringea, as well as existing investors Connect and Speedinvest, two leading seed funds, Bethnal Green Ventures, and notable angels including Taavet Hinrikus, founder of Transferwise.

Additionally, this investment was backed by Uniqa Ventures, and mySugr, the digital diabetes management platform.

Second Nature which is also rebranding from OurPath was the first lifestyle change programme to be commissioned by the NHS specifically for diabetes management. Following a first Seed round in 2018, the total investment in the company, initially set up by NHS advisors to tackle Britain's obesity now hits \$13M (£10M).

Founded in 2015 by former health experts Chris Edson and Mike Gibbs, Second Nature is a programme giving people tailored support to transform their lifestyle habits. Second Nature's approach to health and habit change empowers people to live better, more sustainable lives as well as fostering long-term physical and mental wellbeing.

“Our goal as Second Nature is to solve obesity. We need to rise above the confusing health misinformation to provide clarity about what’s really important: changing habits. Our new brand and investment will help us realise that” - Mike Gibbs, co-founder and CEO, Second Nature
