

1.02M searches for Nintendo Switch and other Amazon insights

With the recent pandemic putting several jobs at risk, many people are turning to alternative options to make money. The likes of Amazon offer a great opportunity to set up a 'stay-at-home' business. But who's behind the products everyone is buying during the pandemic? And how can you get involved?

New research from [Latona's](#) has analysed the state of Amazon selling, right from the top product categories to the seller to shopper ratio. The company has analysed a series of different data sets including the countries contributing the most to Amazon's annual net sales, the demographic split of successful sellers, the seller to Prime US shopper ratio and the best products and categories on Amazon, to create a guide for prospective Amazon sellers and startups, looking to enter the market.

Key findings:

- The 'Movies & TV' seller category offers the most opportunity for new sellers with a ratio of 1 seller to 1030 Prime US shoppers
- The 'Sports & Outdoors' category has the lowest shoppers to seller ratio making it a harder category for startups and new amazon businesses

- 44% of US purchases are from the 'Electronics' category
- The most searched for product from 2019-2020 is the Nintendo Switch with 1,020,000 searches
- The perfect recipe for an Amazon seller is male, with a degree, as 82% of successful sellers have a degree and 69% of successful sellers are male

Which country has the highest percentage of Amazon users?

It's no surprise that the US takes the top spot for its wealth of Amazon users, with CEO Jeff Bezos making the states his primary target audience since the start of his Amazon venture. Latona's report shows that the US is dominating the annual net sales of Amazon, with 69% of total sales in 2019 coming from the US amounting to a whopping \$193.6B (around £158.4B).

In comparison to the US, the UK, Japan and Germany are other key areas for Amazon buyers, however, their margin is nowhere near as great. Germany contributes to 8% of Amazon's annual net sales, followed by the UK and Japan who contribute 6%. The rest of the world combined makes up 11% of Amazon's net sales, 58% less than the US.

The Seller to Shopper Ratio

Prime shoppers are said to be the most loyal and most likely returning customers. An astounding 85% of Prime shoppers visit Amazon at least once a week and a further 45% of Prime members purchase on Amazon at

least once a week. Therefore, Latona's have analysed the perfect market (US) and the perfect shoppers (Prime) in order to find the total number of US Prime shoppers to the number of sellers in the most popular selling categories around the world, to determine which selling categories offer the most potential.

For those looking to target the dominating shopper market that is the US, Latona's have analysed which categories propose the best opportunity for startups and new Amazon sellers.

The best category, according to the analysis, is 'Movies and TV' which promises the highest reach of Prime shoppers to seller ratio, for every 1 seller you have a potential of reaching 1,030 prime shoppers. Second is 'Cell Phones and Accessories' which sees almost 50% less potential Prime shoppers to 1 seller ratio of 1 seller to 577 Prime shoppers. The selling category with the least potential or most competitive is 'Sports and Outdoor' with only 88 Prime US shoppers for every seller.

What does the consumer want?

Looking deeper into the data, which products really are selling the best and what do consumers search for the most on Amazon?

'Electronics' was the most popular category for US shoppers in 2019, with 44% of purchases being from the electronics category. The 'Clothing, Shoes and Jewelry' category follows closely behind with 43% of purchases, and the 'Home and Kitchen' category saw 39% of purchases from US shoppers. With these top three categories in mind, let's take a look at how the other categories compare:

WHERE DO SHOPPERS SPEND THEIR MONEY ON AMAZON?

The most popular categories on Amazon based on the percent of purchases within each category.

Latona's™

RANK	CATEGORY	% OF PURCHASES
1	Electronics	44
2	Clothing, shoes and jewelry	43
3	Home and kitchen	39
4	Beauty and personal care	36
5	Books	33
6	Cell phones and accessories	28
7	Movies and TV	25
8	Pet supplies	20
9	Sports and outdoors	17
10	Grocery and gourmet food	15
11	Automotive parts and accessories	13
12	Other	9
13	Baby	9

The 'Electronics' category sees the most searched for products on Amazon, with 9 out of the 10 of the most searched for products sitting within this category. The most searched for product so far this year is the Nintendo Switch which has received 1,020,000 searches on Amazon. Laptops and AirPods are also sought after products, with laptops receiving 892,000 searches and AirPods receiving 693,000.

The demographic split between Amazon sellers

When it comes to selling on Amazon, do you fit the description of a successful seller?

Latona's analysis of the 2020 state of the Amazon seller report has shown that the majority of Amazon sellers (57%) are between 25 and 44 years old, with almost a third (30%) of sellers being 25-34 years old. Looking at the gender split, only a quarter (26%) of sellers on Amazon are female, with men dominating the seller market (69%).

Degree or no degree? More than three quarters (82%) of Amazon sellers have a degree compared to only 19% that don't.

“Setting up a stay at home business during this unprecedented time is something that a lot of people are doing to avoid falling behind on repayments and bills. With a huge amount of people turning to the likes of Amazon to set up a small startup or become a marketplace seller, the opportunity to make money whilst at home is becoming more and more prevalent. It's really great to see the world of entrepreneurs adapting and changing as the current climate changes. I like that the data shows a variety of different opportunities for new startups to target specific areas of shoppers on Amazon.” - Rick Latona, Director of Latona's
